LEYLA MAMMADOVA

Mobile App Developer | Flutter, Dart, React Native | Full-Stack & AI Integration

Eskişehir, Türkiye | +90 505 765 80 26 | info@leylammdva.com | leylammdva.com | github.com/leimmdva

PROFESSIONAL SUMMARY

Mobile App Developer specializing in Flutter and Dart, building cross-platform iOS and Android applications end to end: UI and design systems, Supabase and PostgreSQL backends, serverless Edge Functions, Google Gemini AI integration, in-app purchases and subscriptions (RevenueCat), AdMob monetization, push notifications and app store release preparation. Also delivers web and backend products with React, Next.js, TypeScript, Node.js, Python (FastAPI) and ASP.NET Core, including AI agents, RAG pipelines and payment integrations (PayPal API). Known for clean architecture, schema-validated AI output, automated testing, accessibility-first design and measuring results with data. Vice President of a university computer science community. Multilingual: Azerbaijani, Turkish, English, Russian.

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, React Native, iOS, Android, cross-platform development, Material Design, responsive UI, state management, local push notifications, in-app purchases and subscriptions (RevenueCat, Google Play Billing, StoreKit), Google AdMob, camera and image picker, PDF generation, deep linking, Google Play Console, App Store Connect, TestFlight, Android App Bundle

Frontend: React 19, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, CSS Modules, React Router, Vite, server-side rendering (SSR) and pre-rendering, responsive and mobile-first design

Backend & Databases: Supabase (Auth, PostgreSQL, Edge Functions, Storage), Firebase, Node.js, RESTful APIs, webhooks, Python, FastAPI, ASP.NET Core (.NET, C#), Entity Framework Core, PostgreSQL, SQL, Drizzle ORM, pgvector, database migrations

AI & Machine Learning: Google Gemini API, LLM integration, AI agents, Retrieval-Augmented Generation (RAG), vector search, embeddings, prompt engineering, structured output with JSON schema validation (Zod), model fallback strategies, evaluation metrics (Recall@k)

Cloud & DevOps: Git, GitHub (issues, pull requests, code review workflow), CI/CD, Docker, Vercel, Render, Neon, Cloudflare R2, S3-compatible storage, environment and secrets management

Testing & Practices: Unit testing and widget testing (flutter_test), Vitest, React Testing Library, pytest, clean code, code review, OAuth / Google Sign-In, payment APIs (PayPal Orders v2), GDPR and data privacy compliance, accessibility (a11y), Figma, UI/UX design

PROFESSIONAL EXPERIENCE

Mobile App Developer (Flutter) - MatrInk **Oct 2026 - Present**

Independent product, Remote | matrink.vercel.app

- Designed and developed **MatrInk**, a cross-platform **Flutter** app for **iOS, Android** and web that combines AI-powered handwriting analysis with Destiny Matrix calculations, daily and monthly readings and downloadable PDF reports.
- Built the backend on **Supabase**: PostgreSQL schema managed through 9 migrations, user authentication with Google Sign-In, private photo storage and **9 serverless Edge Functions** (TypeScript) for AI readings, PDF reports, purchase sync, webhooks and account deletion.
- Integrated the **Google Gemini API** to turn handwriting photos into structured AI reports and to compare a user's handwriting with the previous month, keeping all API keys server-side.
- Implemented monetization with **RevenueCat** (monthly and yearly premium subscriptions, one-time PDF purchase, webhook-based entitlement sync) and **Google AdMob** ads for free users, with GDPR consent and IDFA prompts.
- Added scheduled **local push notifications** with timezone handling, PDF generation and sharing, and accessibility options including a dyslexia-friendly font (OpenDyslexic) and large-text mode.
- Created a custom design system (color tokens, typography scale, reusable widgets) and organized the codebase into feature modules (auth, home, profile, paywall, purchases, ads, legal) with automated tests and lint checks.
- Leading store release: Android App Bundle signing, Google Play closed testing, App Store / TestFlight pipeline, 18+ age rating, data safety forms and a published legal and privacy site (matrink-legal.vercel.app).

Freelance Web Developer **Aug 2023 - Oct 2023**

Self-employed, Eskişehir, Türkiye

- Designed, developed and delivered a responsive, mobile-friendly corporate website for **Patel İnşaat**, a construction company, from requirements gathering to launch.
- Managed the client relationship end to end: scope, content structure, feedback rounds and final handover.

PROJECTS

ProofPay - AI Payment Agent (PayPal AI Hackathon) **Oct 2026 - Present**

Next.js, React, TypeScript, Tailwind CSS, PayPal API, Google Gemini, PostgreSQL, Drizzle ORM, Render

- Building an **agentic commerce** app that holds short-term-rental cleaning payments with **PayPal Orders v2** (authorize) and lets an AI agent release full, partial or no payment after verifying room-by-room photos against the host's rules.
- Turns plain-language host rules into a photo-verifiable checklist and payment policy; every model answer is validated with **Zod** schemas, with automatic fallback across 3 Gemini and Gemma models so quota limits never block the user.
- Verified the full PayPal sandbox flow (authorize, partial capture, payout) and deployed to production on Render with auto-deploy from GitHub; Neon PostgreSQL, S3-compatible object storage and realtime updates.

Dayanak - Legal Q&A Assistant with Citations (RAG) **Oct 2026 - Present**

Python, *FastAPI*, *PostgreSQL*, *pgvector*, *Docker*, *Next.js*, *Gemini*, *Qwen*

- Building a **Retrieval-Augmented Generation (RAG)** assistant that answers questions on Turkish Labor Law and KVKK (data protection law) and cites the exact law article behind each answer.
- Built the data pipeline (fetching, article-level chunking, bge-m3 embeddings) into **PostgreSQL + pgvector**, served through a **FastAPI** REST API and a **Next.js** interface.
- Created an 88-question evaluation set with automated **pytest** validation; compared hybrid search, reranking and query rewriting and improved **Recall@5 from 0.776 to 0.812**, choosing the setup with the best Recall@1 (0.581) and no reranker for lower latency and memory use.

Portfolio Website - leylammdva.com **2026**

React 19, *TypeScript*, *React Router*, *Vite*, *ASP.NET Core (.NET 10)*, *EF Core*, *PostgreSQL*, *Docker*, *Vercel*

- Rebuilding my portfolio (v1: React + Firebase) as a pre-rendered React site on Vercel with an **ASP.NET Core** Minimal API on Docker, PostgreSQL (Neon), Cloudflare R2 file storage, CI pipeline, Vitest tests and a Figma design for desktop and mobile.

LEADERSHIP & COMMUNITY

Vice President - ESOGÜ MACS (Mathematics & Computer Science Club) **Aug 2026 - Present**

Eskişehir Osmangazi University, *Eskişehir*

- Lead the 2026-2027 term plan and management team; presented the new-term roadmap and team to active members at the General Assembly.
- Support the organization of tech events and talks with industry developers (e.g., Devbreak) for a growing student developer community.

Corporate Communications Coordinator - ESOGÜ MACS **May 2025 - Aug 2026**

- Managed the club's corporate communications and social media, and coordinated communication with speakers and partners for events.

EDUCATION

B.Sc. in Mathematics and Computer Science **2022 - Present**

Eskişehir Osmangazi University (ESOGÜ), *Eskişehir*, *Türkiye*

CERTIFICATIONS

- Meta Professional Certificate (Meta, via Coursera)
